WeatherPy

March 27, 2018

Observed Trends:

1. The closer a city is to the equator (a lower absolute value of latitude), the higher the temperature of the city is.
2. Surprisingly, the humidity in a city does not have a strong correlate with the temperature or latitude. Cities across the entire latitude range have similar humidity levels. This observation applies to the cloudiness percentage for each city, and for the wind speed for each city.
3. However, the highest wind speeds appeared farthest away from the equator, and those cities approximately 20 degrees North or South of the equator had the lowest humidity percentages.
